

Supplementary Fig. 1. Grading system of color Doppler signal (CDS). The semi-quantitative grading system of the CDSs in the intestinal wall. The amount of blood flow signal within a 10 × 10 mm square region of interest was evaluated. (A) Grade 0: no CDS. (B) Grade 1: few spotty signals. (C) Grade 2: confluent vessel signals in less than half of the area of the bowel wall. (D) Grade 3: confluent vessel signals in more than half of the area of the bowel wall.
