

Supplementary Table 3. Multivariate Analyses of WPAI and HRQoL among Treated UC Patients with ≥ 1 Persisting UC Symptoms^a

Variable	Coefficient	Standard error	P-value
WPAI ^a			
Absenteeism % (n = 168) ^b	2.76	0.39	< 0.01
Presenteeism % (n = 185) ^b	0.41	0.05	< 0.01
Overall work impairment % (n = 167) ^c	0.39	0.06	< 0.01
Activity impairment % (n = 293)	0.36	0.04	< 0.01
HRQoL ^a			
EQ VAS (n = 293)	-0.14	0.02	< 0.01
MCS (n = 293)	-0.13	0.03	< 0.01
PCS (n = 293)	-0.06	0.02	< 0.01

^aResults were adjusted for potential covariates, including demographic and general health characteristics.

^bThe sample sizes pertaining to absenteeism, presenteeism, and overall work impairment rely on respondents who provided responses to relevant questionnaires within the employed patient population.

^cMultivariate analysis conducted with patients without persisting symptoms as reference.

WPAI, work productivity and activity impairment; EQ VAS, EuroQol visual analog scale; HRQoL, health-related quality of life; UC, ulcerative colitis; MCS, mental component score; PCS, physical component score.
